

RBC Global Equity

Quarterly Commentary

The RBC Global Equity Strategy returned 3.3% in Q2 2018 versus a 1.7% return for the MSCI World Net Index, an outperformance of 1.6% (geometric basis). Our holding in U.S. onshore oil e&p company EOG Resources was the top contributor due to operational performance and a supportive oil price. Positions in U.S. bank SVB and U.S. discount retailer TJX also contributed. SVB rose by over 20% in the quarter after posting some extremely impressive numbers, and TJX advanced on strong year-on-year same-store sales growth.

The biggest detractor over the quarter was our holding in German logistics company Deutsche Post DHL which fell after weaker-than-expected results. Positions in Taiwanese semi-conductor manufacturer TSMC and U.S. biotech Incyte also detracted. TSMC fell after disappointing Q1 results and reduced guidance on projected smartphone demand. Incyte sold off markedly after disappointing trial results for one of its cancer combination compounds but we feel that the market reaction was excessive and largely ignores the r&d potential the company possesses.

Investment Performance

| Calendar Year (%) | 2017 | 2016 | 2015 | 2014 | 2013 | Cumulative SI |
|-------------------|-------|------|-------|------|-------|---------------|
| Strategy (Gross) | 35.37 | 4.06 | 4.79 | 7.03 | 29.68 | 167.56 |
| Benchmark | 22.40 | 7.51 | -0.87 | 4.94 | 26.68 | 96.23 |

Past performance is not indicative of future results and is calculated in USD. Returns may increase or decrease as a result of currency fluctuations.

Strategy Overview

- \$3,337 million Assets Under Management
- Inception: September 2006
- Benchmarks: MSCI World Net Index, MSCI ACWI Net Index
- Vehicles: Separate Account, SICAV (ISIN: LU1096671539), US '40 Act, US 3C7, Canadian Mutual Fund

Investment Philosophy & Style

- Businesses with strong competitive dynamics generate considerable economic value over the long-term - poor businesses destroy it
- Owning over-priced stocks puts capital at risk
- Differentiated source of alpha with very low correlation to style-driven managers and peer group

Investment Process

- Identify competitive businesses with growth opportunities
- Conviction-based strategy aims to deliver predictable and consistent risk-adjusted returns
- Embedded risk management process dedicated to monitoring and managing risk
- Integrated ESG factors to identify long term risks to financial sustainability

Portfolio Construction

- High conviction portfolio: typically 30 - 40 holdings
- Majority of returns sought from stock selection
- Maximum in a single security: 7.5%
- Sector exposure +/- 10% versus benchmark
- Country exposure +/- 10% versus benchmark (expect U.S. +/- 15%)

Description of the Firm: For the purposes of Global Investment Performance Standards (GIPS®), RBC Global Asset Management is the asset management division of Royal Bank of Canada (RBC), operating under the following brands: RBC Global Asset Management (RBC GAM) in Canada, the U.S. (institutional), the U.K. and Hong Kong; Phillips, Hager & North Investment Management (institutional); and BlueBay Asset Management (institutional). With offices around the world, RBC GAM offers a full range of global investment solutions in cash management and fixed income, equity, balanced, alternative and specialty investment strategies through mutual funds, hedge funds, pooled funds and separately managed accounts. The RBC GAM group of companies has more than C\$417 billion (US\$331 billion) in assets under management as at December 31, 2017. RBC purchased Phillips, Hager & North Investment Management, including the assets of BonaVista Asset Management, on May 1, 2008, and BlueBay Asset Management on December 17, 2010. A complete list and description of the firm's composites and performance results is available upon request.

Compliance Statement: RBC GAM claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. RBC GAM has been independently verified for the periods January 1, 2002 through December 31, 2017. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Global Equity - Concentrated (USD) composite has been examined for the periods September 1, 2006 - December 31, 2017. The verification and performance examination reports are available upon request.

Composite Description: The Global Equity - Concentrated (USD) Composite is defined as consisting of those mandates that have exposure primarily in stocks of all the developed markets in the world, with high alpha concentration. Funds may also invest between 20 - 30% of their assets in Emerging Markets.

Benchmark: The primary benchmark for the composite is the MSCI World (net of withholding taxes) - a free-float weighted equity index. The index is designed to measure the equity market performance of developed markets across the world. The MSCI All Country World Index (net of withholding taxes) - a free-float weighted equity index is also used as a secondary benchmark.

Gross of Fees: Performance total returns have been calculated before management fees & expenses and after all trading commissions. Returns are calculated net of non-reclaimable taxes on dividends, interest, and capital gains. Reclaimable withholding taxes have been accrued.

Net of Fees: Net of fee performance is calculated using the maximum stated annual fee of 0.70% calculated and applied monthly.

Performance Calculations: Results are based on all fully discretionary accounts meeting the composite definition, including those accounts no longer with the firm. Returns are shown in U.S. Dollars, and include the reinvestment of all income. Performance shown for the Global Equity- Concentrated Composite is based on information generated by RBC Global Asset Management's internal performance systems starting February 1, 2014, which may differ from the performance shown in official books and records of certain investment funds which form a part of the composite. Official books and records for certain investment funds which form a part of the composite include the impact of a fair value for market timing that is applied to certain securities as of the close of trading for the fund. For the purposes of calculating the Global Equity - Concentrated Composite, we prepare a separate performance stream for such funds that eliminates the impact of this fair value adjustment. This second performance stream is used to calculate performance of the composite in an effort to better align the methodology for calculating composite performance with the methodology applied to calculate the benchmark. Additional information regarding policies for valuing portfolios, calculating performance, and preparing presentations is available upon request. Past performance is not indicative of future results.

Composite Dispersion: The composite dispersion of annual returns is indicated by the performance of individual accounts representing the equal weighted standard deviation of returns. Dispersion of returns is calculated for portfolios included in the composite for the full year.

3-Year Standard Deviation: Periods with less than 3 years of data will show "n/a".

Derivatives, Leverage and Short Positions: The use of hedging or leverage has not been used in the management of any funds within the composite.

Cash Flow Policy: For all periods from January 1, 2010 - January 31, 2014, the composite has had in place a significant cash flow policy whereby a portfolio will be removed from the composite if the cash flow is 10% or more of a portfolio's (or fund's) value. The firm has determined that an external cash flow of 10% or more may temporarily prevent the firm from implementing the intended investment strategy; thereby the fund is no longer representative of the composite strategy.

Fee Schedule: The management fee schedule is as follows: 0.70% for the first US\$50m, 0.60% on the next US\$50m, and 0.55% for all assets over US\$100m. Advisory fees are described on this page and on Form ADV Part 2A. RBC GAM reserves the right to negotiate all advisory fees.

Minimum Account Size: There is currently no minimum account size for inclusion in this composite.

Creation Date: This composite was created on February 1, 2014, with a data inception of September 1, 2006.

Composite History: Performance for the periods September 1, 2006 - January 31, 2014 was achieved while under employment at First State Investments. Past performance has been linked to the on-going performance of the RBC GAM Global Equity Concentrated Composite starting January 1, 2014. While at First State the composite was called the FSI High Alpha Concentrated Composite.
